WARNING

To prevent fire or shock hazard, do not expose the unit to rain or moisture.

To avoid electrical shock, do not open the cabinet. Refer servicing to qualified personnel only.

For the customers in the USA
If you have any questions about this product, you may call:
Sony Customer Information Service Center
1-800-222-7669 or http://www.sony.com/
The number below is for FCC related matters only.

Declaration of Conformity
Trade Name: SONY
Model No.: VPL-CS7/VPL-ES2
Responsible Party: Sony Electronics Inc.
Address: 16450 W. Bernardo Dr, San Diego, CA 92127 U.S.A.
Telephone Number: 858-942-2230

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.
For the customers in Canada

This Class B digital apparatus complies with Canadian ICES-003.

Voor de klanten in Nederland

Gooi de batterij niet weg maar lever deze in als klein chemisch afval (KCA).

The socket-outlet should be installed near the equipment and be easily accessible.

CAUTION

RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS.

Precautions

On safety

- Check that the operating voltage of your unit is identical with the voltage of your local power supply.
- Should any liquid or solid object fall into the cabinet, unplug the unit and have it checked by qualified personnel before operating it further.
- Unplug the unit from the wall outlet if it is not to be used for several days.
- To disconnect the cord, pull it out by the plug. Never pull the cord itself.
- The wall outlet should be near the unit and easily accessible.
- The unit is not disconnected to the AC power source (mains) as long as it is connected to the wall outlet, even if the unit itself has been turned off.
- Do not look into the lens while the lamp is on.
- Do not place your hand or objects near the ventilation holes. The air coming out is hot.
- Be careful not to have your fingers caught by the adjuster. The powered tilt adjuster of this unit automatically extends when the power is turned on, and is put away automatically when the power is turned off. Do not touch the unit while the adjuster is in operation. Adjust the powered tilt adjuster carefully after its automatic operation is completed.
- Do not spread a cloth or paper under the unit.

On illumination

- To obtain the best picture, the front of the screen should not be exposed to direct lighting or sunlight.
- Ceiling-mounted spot lighting is recommended. Use a cover over fluorescent lamps to avoid lowering the contrast ratio.
- Cover any windows that face the screen with opaque draperies.
- It is desirable to install the projector in a room where floor and walls are not of light-reflecting material. If the floor and walls are of reflecting material, it is recommended that the carpet and wall paper be changed to a dark color.

On preventing internal heat build-up

After you turn off the power with the [I/O] key, do not disconnect the unit from the wall outlet while the cooling fan is still running.

Caution

The projector is equipped with ventilation holes (intake) and ventilation holes (exhaust). Do not block or place anything near these holes, or internal heat build-up may occur, causing picture degradation or damage to the projector.

On cleaning

- To keep the cabinet looking new, periodically clean it with a soft cloth. Stubborn stains may be removed with a cloth lightly dampened with a mild detergent solution. Never use strong solvents, such as thinner, benzene, or abrasive cleansers, since these will damage the cabinet.
- Avoid touching the lens. To remove dust on the lens, use a soft dry cloth. Do not use a damp cloth, detergent solution, or thinner.
- Clean the filter at regular intervals.

On LCD data projector

- The LCD data projector is manufactured using high-precision technology. You may, however, see tiny black points and/or bright points (red, blue, or green) that continuously appear on the LCD data projector. This is a normal result of the manufacturing process and does not indicate a malfunction.
Notes on Installation and Usage

Unsuitable Installation

Do not install the projector in the following situations. **These installations may cause a malfunction or damage** to the projector.

**Poorly ventilated**

- Allow adequate air circulation to prevent internal heat build-up. Do not place the unit on surfaces (rugs, blankets, etc.) or near materials (curtains, draperies) that may block the ventilation holes. When the internal heat builds up due to the block-up, the temperature sensor will function with the message “High temp.! Lamp off in 1 min.” The power will be turned off automatically after one minute.
- Leave space of more than 30 cm (11 7/8 inches) around the unit.
- Be careful that the ventilation holes may inhale tininess such as a piece of paper.

**Highly heated and humid**

- Avoid installing the unit in a location where the temperature or humidity is very high, or temperature is very low.
- To avoid moisture condensation, do not install the unit in a location where the temperature may rise rapidly.

**Subject to direct cool or warm air from an air-conditioner**

Installing in such a location may cause malfunction of the unit due to moisture condensation or rise in temperature.

**Near a heat or smoke sensor**

Malfunction of the sensor may be caused.

**Very dusty, extremely smoky**

Avoid installing the unit in a very dusty or extremely smoky environment. Otherwise, the air filter will become obstructed, and this may cause a malfunction of the unit or damage it. Dust preventing the air passing through the filter may cause a rise in the internal temperature of the unit. Clean the filter periodically.
Notes on Installation and Usage

Unsuitable Conditions

Do not use the projector under the following conditions.

Toppling the unit

Avoid using as the unit topples over on its side. It may cause malfunction.

Blocking the ventilation holes

Avoid using something to cover over the ventilation holes (exhaust/intake); otherwise, the internal heat may build up.

For details on the ventilation holes (intake/exhaust), see “Location and Function of Controls” on page 11.

Usage in High Altitude

When using the projector at an altitude of 1,500 m or higher, turn on “High Altitude Mode” in the INSTALL SETTING menu. Failing to set this mode when using the projector at high altitudes could have adverse effects, such as reducing the reliability of certain components.

Note on carrying the projector

The unit is manufactured using high-precision technology. When transporting the unit stored in the soft case, do not drop the unit or subject it to shock, as this may cause damage. When storing the unit in the soft case, disconnect the AC power cord and all other connecting cables, and store the supplied accessories in a pocket of the soft case.

Note on the screen

When using a screen with an uneven surface, stripes pattern may rarely appear on the screen depending on the distance between the screen and the projector or the zooming magnifications. This is not a malfunction of the projector.
Features

High brightness, high picture quality
- **High brightness**
  This projector is equipped with a high-efficiency optical system made possible by adopting Sony’s proprietary optical system that is equipped with a newly developed LCD panel. Because the VPL-CS7 utilizes a 185 W UHP lamp, it can reproduce bright images at 1800 ANSI lumen, while the VPL-ES2 utilizes a 157 W UHP lamp, that can reproduce bright images at 1500 ANSI lumen.

- **High resolution**
  Three superhigh-aperture 0.62-inch SVGA panels with approximately 480,000 pixels provide a resolution of 800 × 600 dots (horizontal/vertical) for RGB input, and 600 horizontal TV lines for video input.

High operability
- **Intelligent Auto-setup function**
  Simply press the power key, and the projector automatically performs the setups required before use. The projector opens the lens protector, corrects the V Keystone, and sets optimum conditions for projection. This function is called Intelligent Auto-setup.
  For easier operations, the keys that will be used frequently are allocated on the top of the projector.

Short focus lens equipped
This projector is equipped with a short focus lens that allows outputting to a larger screen even in a limited space.

Various picture modes (VPL-ES2 only)
The best image can be projected by choosing the mode suitable for the type of program or room environment from among six picture modes.

Accepts various input signals
- **Scan converter loaded**
  This projector has a build-in scan converter that converts the input signal within 800 × 600 dots.

- **Compatible input signals**
  This projector accepts video signals of composite, S video, component and DTV as well as VGA, SVGA and XGA signals, which all can be displayed.

- **Compatible with six color systems**
  NTSC, PAL, SECAM, NTSC4.43*, PAL-M, or PAL-N color system can be selected automatically.

Easy presentation
- **Simple setup with external equipment**
  This projector is preset for 32 kinds of input signals. You can project images from an external signal source just by connecting the equipment with the supplied cable.

---

*NTSC4.43 is the color system used when playing back a video recorded on NTSC on a NTSC4.43 system VCR.

- Windows is a registered trademark of Microsoft Corporation in the United States and/or other countries.
- VGA, SVGA and XGA are registered trademarks of the International Business Machines Corporation, U.S.A.
- Kensington is a registered trademark of Kensington Technology Group.
- Macintosh is a registered trademark of Apple Computer, Inc.
- VESA is a registered trademark of Video Electronics Standard Association.
- Display Data Channel is a trademark of Video Electronics Standard Association.
Easy-to-use Remote Commander

The Remote Commander is equipped with various convenient keys, including the D ZOOM key for zooming in on the image and the FREEZE key for keeping the image projected even if the equipment is disconnected.

High portability

• Light weight/small size/simple design
  This projector has been miniaturized to approx. 2.8 kg (6 lb 3 oz) (VPL-ES2)/approx. 2.9 kg (6 lb 6 oz) (VPL-CS7) in weight and B5-file size. Its simple yet sophisticated design fits comfortably in your office.

Off & Go function (VPL-CS7 only)

The cooling fan built in the projector will work even after turning the power off and the power cord is disconnected. This enables you to move the projector to another location immediately after turning it off.

Security functions

Security lock

This function makes it possible to project no picture on the screen unless the required password is entered when the projector is turned on.

Panel key lock

This function locks all the operation keys on the control panel of the projector, allowing use of the keys on the Remote Commander. This prevents the projector from operating incorrectly.
Location and Function of Controls

1. Control panel
   For details, see “Control Panel” on page 12.

2. Lens protector (lens cover)
   The lens protector automatically opens when the power is turned on.

3. Ventilation holes (exhaust)

4. Remote control detector

5. Adjuster (hind pad)
   Turn the adjuster to the right or left for minor tilt adjustment of the projected picture.

6. Ventilation holes (intake)/Lamp cover

7. Ventilation holes (intake)/air filter cover

Notes
- Do not place anything near the ventilation holes as it may cause internal heat build-up.
- Do not place your hand or objects near the ventilation holes as it may cause the air coming out heat build-up.
- To maintain optimal performance, clean the air filter every 500 hours.

For details, see “Cleaning the Air Filter” on page 42.

8. Ventilation holes (intake)

9. Powered tilt adjuster

10. Indicators

    POWER SAVING
    Lights up when the projector is in power saving mode.

    TEMP (Temperature)/FAN
    Lights up or flashes under the following conditions:
    – Lights up when temperature inside the projector becomes unusually high.
    – Flashes when the fan is broken.

    LAMP/Cover
    Lights up or flashes under the following conditions:
    – Lights up when the lamp has reached the end of its life or becomes a high temperature.
    – Flashes when the lamp cover is not secured firmly.

For details, see pages 34, 45.

11. Focus ring
    Adjusts the picture focus.

12. Zoom ring
    Adjusts the picture size.
**Connector panel**

*For details, see “Connector Panel” on page 13.*

**Speaker**

**Security lock**

Connects to an optional security cable (Kensington’s).

Web page address: http://www.kensington.com/

---

**Control Panel**

1. **I / (on/standby) key**
   
   Turns on the projector when the projector is in standby mode. The ON/STANDBY indicator around the I / key lights in green when the power is turned on.

2. **ON/STANDBY indicator (located around the I / key)**

   Lights up or flashes under the following conditions:
   - Lights in red when a AC power cord is plugged into a wall outlet. Once in standby mode, you can turn on the projector with the I / key.
   - Lights in green when the power is turned on.
   - Flashes in green while the cooling fan runs for about 90 seconds (VPL-ES2)/for about 70 seconds (VPL-CS7) after the power is turned off with the I / key.

   *For details, see page 21.*

3. **INPUT key**

4. **TILT adjustment key**

   *For details, see “Projecting” on page 19.*

5. **MENU key**

   Displays the on-screen menu. Press again to clear the menu.

6. **ENTER key**

   Enters the settings of items in the menu system.

7. **Arrow keys (△▽←→)**

   Select the menu or to make various adjustments.
1 **INPUT A connector (HD D-sub 15-pin, female)**
Connect to external equipment such as a computer.
Connects to the monitor output on a computer using the supplied cable.
When inputting a component or 15k RGB signal, use an optional cable.
*For details, see “To connect to a video GBR/component output connector” on page 18.*

2 **Video input connector**
Connect to external video equipment such as a VCR.

3 **AUDIO (stereo minijack) connector**
When listening to sound output from the computer, connect to the audio output of the computer.
When listening to sound output from the VCR, connect to the audio output of the VCR.

4 **Monitor output connector (VPL-CS7 only)**
Connects to the monitor input on a monitor. Outputs the signal from a computer connected to INPUT A.

5 **AC IN socket**
Connects the supplied AC power cord.

6 **Component input connector (for VPL-ES2 only)**
According to the connected equipment, component (Y/Cb/Cr), HDTV or DTV (Y/Pb/Pr) signal is selected.

- **VIDEO (phono type):** Connects to the composite video output of video equipment.
- **S VIDEO (mini DIN 4-pin):**
  Connects to the S video output (Y/C video output) of video equipment.
### Remote Commander

#### Remote Commander Diagram

1. **I / (on/standby) key**
2. **ENTER/arrow key (▲▼←→)**
   - Press the center of the key to use ENTER.
3. **MENU key**
4. **D ZOOM +/– key**
   - Enlarges the image at a desired location on the screen.
5. **Infrared transmitter**
6. **FREEZE key**
   - Used to freeze the picture projected. To cancel the freeze function, press the key again.
7. **INPUT key**
8. **APA (Auto Pixel Alignment) key**
   - Adjusts a picture clearest automatically while a signal is input from a computer.
   
   *For details, see “Smart APA” in the SET SETTING menu on page 33.*
9. **D KEYSTONE key**
   - Used to adjust the tilt of the projector, or the trapezoidal distortion of the image manually. Each time you press this key, the Tilt menu and the V Keystone menu is displayed alternately. Use the arrow key (▲▼←→) for the adjustment.
10. **RESET key**
    - Resets the value of an item back to its factory preset value or returns the enlarged image back to its original size. This key functions when the menu or a setting item is displayed on the screen.

---

#### Before using the Remote Commander

Pull out the clear film from the lithium battery holder.

#### To replace battery

1. Release the lock of the lithium battery holder by picking it, and pull out the holder from the Remote Commander.
2. Install the lithium battery.
3. Put the lithium battery holder back into the Remote Commander.

#### Notes on the lithium battery

- Keep the lithium battery out of the reach of children.
- Should the battery be swallowed, immediately consult a doctor.
Notes on Remote Commander operation

- Make sure that nothing obstructs the infrared beam between the Remote Commander and the remote control detector on the projector. Direct the Remote Commander toward the remote control detector.
- The operation range is limited. The shorter the distance between the Remote Commander and the remote control detector is, the wider the angle within which the commander can control the projector becomes.
Installing the Projector

This section describes how to install the projector.
The distance between the lens and the screen varies depending on the size of the screen. Use the following table as a guide.

<table>
<thead>
<tr>
<th>Screen size (inches)</th>
<th>40</th>
<th>60</th>
<th>80</th>
<th>100</th>
<th>120</th>
<th>150</th>
<th>200</th>
<th>300</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum Distance</td>
<td>1.1</td>
<td>1.7</td>

</table>

Unit: m (feet)

There may be a slight difference between the actual value and the design value shown in the table above.
Connecting the Projector

When you connect the projector, make sure to:

- Turn off all equipment before making any connections.
- Use the proper cables for each connection.
- Insert the cable plugs firmly; loose connections may increase noise and reduce performance of picture signals.

When pulling out a cable, be sure to pull it out from the plug, not the cable itself.

Connecting with a Computer

This section describes how to connect the projector to a computer.
For more information, refer to the computer’s instruction manual.

To connect a computer

Ex. VPL-CS7

1. HD D-sub 15-pin cable (supplied)
2. Stereo audio connecting cable (not supplied)
   (Use a no-resistance cable)

Notes

- The projector accepts VGA, SVGA, XGA signals. However, we recommend that you set the output mode of your computer to SVGA mode for the external monitor.
- If you set your computer, such as a notebook type, to output the signal to both your computer’s display and the external monitor, the picture of the external monitor may not appear properly. Set your computer to output the signal to only the external monitor.

For details, refer to the computer’s operating instructions supplied with your computer.
To connect a Macintosh computer equipped with video output connector of a type having two rows of pins, use a commercially available plug adaptor.

**Connecting with a VCR**

This section describes how to connect the projector to a VCR. For more information, refer to the instruction manuals of the equipment you are connecting.

**To connect to a video or S video output connector**

Ex. VPL-CS7

**To connect to a video GBR/component output connector**

Ex. VPL-ES2

**Notes**

- Set the aspect ratio using “Wide Mode” in the INPUT SETTING menu according to the input signal.
- When you connect the INPUT A connector on the unit to a video GBR output connector, select “Video GBR,” or when you connect it to a component output connector, select “component” with the “Input-A Signal Sel.” setting in the SET SETTING menu. The input selection must be performed before inputting the signal.
- Use the composite sync signal when you input the external sync signal from video GBR/component equipment.
Connecting with a Monitor Equipment (VPL-CS7 only)

This section describes how to connect the projector to a monitor equipment. For more information, refer to the instruction manuals of the equipment you are connecting.

* This projector is not guaranteed for connecting more than 2 monitors in loop-through connection.

Projecting

1. Plug the AC power cord into a wall outlet, then connect all equipment. The ON/STANDBY indicator lights in red and the projector goes into standby mode.

2. Press the I/ key. The ON/STANDBY indicator lights in green and the Intelligent Auto-setup starts. The lens protector opens, and the powered tilt adjuster rises and stops at the previously adjusted position.

3. Turn on the equipment connected to the projector.
4 Press the INPUT key to select the input source.
Each time you press the key, the input signal switches as follows:

<table>
<thead>
<tr>
<th>To input from</th>
<th>Press INPUT to display</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer connected to the INPUT A connector</td>
<td>INPUT A</td>
</tr>
<tr>
<td>Equipment connected to the component connector</td>
<td>Component (VPL-ES2 only)</td>
</tr>
<tr>
<td>Video equipment connected to the VIDEO input connector</td>
<td>VIDEO</td>
</tr>
<tr>
<td>Video equipment connected to the S VIDEO input connector</td>
<td>S VIDEO</td>
</tr>
</tbody>
</table>

Smart APA (Auto Pixel Alignment) adjusts the picture of the connected equipment so that it is projected clearly.

5 Switch the equipment to be connected to output to the projector.
Depending on the type of your computer, for example a notebook, or an all-in-one LCD type, you may have to switch the computer to output to the projector by pressing certain keys (e.g., LCD/VGA, , etc.), or by changing your computer’s settings.

6 Adjust the position of the picture.

**To adjust using the Remote Commander**
To adjust the position of the picture, using the Remote Commander, press the D KEYSTONE key on the Remote Commander to display the Tilt menu and adjust the tilt using the ▲▼/◄► keys.

**To adjust using the Control Panel**
Press △ on ▲ of the TILT key to adjust the tilt of the projector.

---

**Notes**
- If “Auto Input Search” is set to “On,” the projector searches for the signals from the connected equipment and displays the input channel where the input signals are found.

  For details, see “Auto Input Search” in the SET SETTING menu on page 33.
- The Smart APA is effective for the input signal from a computer only.

---

Fx: “x” indicate an optional numerical value. The Fx key varies depending on a computer’s makers.
Turning Off the Power

1. Press the I/ symbols key.
   “POWER OFF? Please press I/ symbols key again.” appears to confirm that you want to turn off the power.

   **Note**
   A message disappears if you press any key except the I/ symbols key, or if you do not press any key for five seconds.

2. Press the I/ symbols key again.
   The powered tilt adjuster is put away in the projector and the lens protector closes. The ON/STANDBY indicator flashes in green and the fan continues to run for about 70 seconds (VPL-CS7)/for about 90 seconds (VPL-ES2) to reduce the internal heat. Also, the ON/STANDBY indicator flashes quickly for the first 60 seconds. During this time, you will not be able to light up again the ON/STANDBY indicator with the I/ symbols key.

3. Unplug the AC power cord from the wall outlet after the fan has stopped running and the ON/STANDBY indicator has light in red.

   **When you cannot confirm the on-screen message**
   When you cannot confirm the on-screen message in a certain condition, you can turn off the power by holding the I/ symbols key for about two seconds.
Notes

- Do not unplug the AC power cord while the fan is still running; otherwise, the fan will stop even though the internal heat is still high, which could result in a breakdown of the projector. (VPL-ES2 only)
- The internal circuitry of the Off & Go function may cause the fan to continue to operate for a short time even after the I/ key is pressed to turn off the power and the ON/STANDBY indicator changes to red. (VPL-CS7 only)

For details, see “Off & Go Function (VPL-CS7 only)” on page 25.
Selecting the Menu Language

You can select one of fifteen languages for displaying the menu and other on-screen displays. The factory setting is English. To change the menu language, proceed as follows:

1. Plug the AC power cord into a wall outlet.
2. Press the I / key to turn on the projector.
3. Press the MENU key. The menu appears.
4. Press the ▲ or ▼ key to select the MENU SETTING menu, then press the ► or ENTER key. The selected menu appears.
5. Press the ▲ or ▼ key to select “Language,” then press the ► or ENTER key.
6. Press the ▲, ▼, ◀ or ► key to select a language, then press the ENTER key. The menu changes to the selected language.

To clear the menu
Press the MENU key. The menu disappears automatically if a key is not pressed for one minute.
Security Lock

The projector is equipped with a security lock function. When you turn the power of the projector on, you are required to input the previously set password. If you do not input the correct password, you will not be able to project the picture.

Note

You will not be able to use the projector if you forget your password and the password administrator is not available. Be please aware that using the security lock can prevent valid usage in such cases.

To use the security lock

1 Press the MENU key and then, in the INSTALL SETTING menu, turn on the “Security Lock” setting.

2 Enter the password.

   Use the MENU, , , , and ENTER keys to enter the four-digit password. (The default setting is “ENTER, ENTER, ENTER,” Input “ENTER” four times when you use the projector for the first time.)

Next, the screen for entering a new password is displayed. (Enter the current password at this screen if you want to keep it.)

3 Enter the password again to confirm.

   The security lock is completed when the following message appears.

If the menu screen displays an “Invalid Password!” message, do over again from step 1.

4 Turn the main power off and disconnect the AC power cord.

   The security lock is set to on, then it becomes effective. The screen for entering the password is displayed when the power is turned on the next time.

Security certification

When the screen for entering the password is displayed, enter the password that was set. If you fail to enter the correct password after three tries, the projector cannot be used. In this case, press the 1/ key to turn off the power.
To cancel the security lock

1 Press the MENU key, then turn off the “Security Lock” setting in the INSTALL SETTING menu.

2 Enter the password.
   Enter the password that was set.

Note
If you call the customer service center because you have forgotten the password, you will need to be able to verify the projector’s serial number and your identity. (This process may differ in other countries.) Once your identity has been confirmed, we will provide you with the password.

Other Functions

Off & Go Function (VPL-CS7 only)

If you are leaving the conference room immediately, turn the projector off, the powered tilt adjuster is put away in the projector, and then, after the lens protector closes, you can unplug the AC power cord. After the AC power cord is unplugged, the fan runs for a certain time automatically.

Notes
- When unplugging the AC power cord, ensure that the powered tilt adjuster is put away in the projector and the lens protector closes. Moving the projector with the powered tilt adjuster raised may damage the adjuster.
- Turn off the projector according to the procedure in “Turning off the power”, then cool it down when storing the projector in the carrying case.
- However, if the unit has been on for less than 15 minutes, the fan might not begin to turn as a result of inadequate charging. In that case, follow the procedure for turning off the power as described in “Turning Off the Power” on page 21.
Effective Tools for Your Presentation

To enlarge the image (Digital Zoom function)
You can select a point in the image to enlarge. This function works when a signal from a computer is input. This function does not work when a video signal is input.

1. Project a normal image, and press the D ZOOM + key on the Remote Commander.
   The digital zoom icon appears in the center of the image.

2. Move the icon to the point on the image you want to enlarge. Use the arrow key (▲/▼/◄/►) to move the icon.

3. Press the D ZOOM + key again.
   The image where the icon is located is enlarged. The enlargement ratio is displayed on the screen for a few seconds.
   By pressing the + key repeatedly, the image size increases (ratio of enlargement: max. 4 times.)

To return the image back to its original size
Press the D ZOOM – key. Just pressing the RESET key returns the image back to its original size immediately.

To freeze the image projected (Freeze function)
Press the FREEZE key. “Freeze” appears when the key is pressed. This function works when a signal from a computer is input. To restore the original screen, press the FREEZE key again.

Use the arrow key (▲/▼/◄/►) to scroll the enlarged image.
Adjustments and Settings Using the Menu

Using the MENU

The projector is equipped with an on-screen menu for making various adjustments and settings.

Display items

Input signal indicator

Shows the selected input channel. is displayed when no signal is input. You can hide this indicator using “Status” in the MENU SETTING menu.

Input signal setting indicator

Picture adjustment menu

Input signal indicator

Shows the selected input channel. is displayed when no signal is input. You can hide this indicator using “Status” in the MENU SETTING menu.

Input signal setting indicator

For Input A: Shows “Computer,” “Component” or “Video GBR.”

For Video/S Video input: Shows “Auto” or the “Color System” setting in the SETTING menu.

1 Press the MENU key. The menu appears. The menu presently selected is shown as a yellow button.

2 Use the ▲ or ▼ key to select a menu, then press the ▶ or ENTER key. The selected menu appears.

3 Select an item. Use the ▲ or ▼ key to select the item, then press the ▶ or ENTER key. The setting items are displayed in a pop-up menu or in a sub menu.

Menu

Setting items
4 Make the setting or adjustment on an item.
   • When changing the adjustment level:
     To increase the number, press the ▲ or ▶ key.
     To decrease the number, press the ▼ or ◀ key.
     Press the ENTER key to restore the previous screen.
   • When changing the setting:
     Press the ▲ or ▼ key to change the setting.
     Press the ENTER or ◀ key to restore the previous screen.

When setting the Menu Language, see “Selecting the Menu Language” on page 23.

To clear the menu
Press the MENU key.
The menu disappears automatically if a key is not pressed for one minute.

To reset items that have been adjusted
Press the RESET key on the Remote Commander.
“Complete!” appears on the screen and the settings appearing on the screen are reset to their factory preset values.
Items that can be reset are:
   • “Contrast,” “Brightness,” “Color,” “Hue,” and “Sharpness” in the Adjust Picture... menu.
   • “Dot Phase,” “H Size,” and “Shift” in the Adjust Signal... menu

About the memory of the settings
The settings are automatically stored in the projector memory.

If no signal is input
If there is no input signal, “Cannot adjust this item.” appears on the screen.

About unadjustable items
Items that cannot be adjusted depending on the input signal are not displayed in the menu.

For details, see page 39.
## The PICTURE SETTING Menu

The PICTURE SETTING menu is used for adjusting the picture or volume.

### Setting items | Functions | Initial setting value
--- | --- | ---
**Picture Mode** | Selects the picture mode.  
- **Dynamic**: Emphasizes the contrast to produce a “dynamic” picture.  
- **Standard**: Normally select this setting. If the picture has roughness with the “Dynamic” setting, this setting reduces the roughness.  
The following picture mode can be used for VPL-ES2 only.  
- **Game**: Select for viewing game picture.  
- **Living**: Select for viewing sports, music, digital video camera picture.  
- **Cinema**: Select for viewing film-like picture.  
- **Presentation**: Select for viewing presentation files | according to an input signal

**Volume** | Adjusts the volume. | 30

**Adjust Picture...** | The unit can store the setting values of the following sub menu items for each “Dynamic,” “Standard” or “Game,” “Living,” “Cinema,” “Presentation” (VPL-ES2 only) picture mode separately. |
--- | --- |
**Contrast** | Adjusts the picture contrast. | according to an input signal

**Brightness** | Adjusts the picture brightness. | according to an input signal

**Color** | Adjusts color intensity. | according to an input signal

**Hue** | Adjusts color tones. The higher the setting, the picture becomes greenish. The lower the setting, the picture becomes purplish. | 50

**Sharpness** | Selects the picture sharpness from among “High,” “Middle” and “Low.” The “High” setting makes the picture sharp; the “Low” setting makes it soft. | according to an input signal

</table>
| Wide Mode           | Sets the aspect ratio of the picture.  
                      • **Off:** When the picture with ratio 4:3 is input.  
                      • **On:** When the picture with ratio 16:9 (squeezed) is input from equipment such as a DVD player. | according to a picture mode             |
| Adjust Signal...    | **Dot Phase** Adjusts the dot phase of the LCD panel and the signal output from a computer. Adjust the picture further for finer picture after the picture is adjusted by pressing the APA key. | according to an input signal           |
|                     | **H Size** Adjusts the horizontal size of picture output from a connector. Adjust the setting according to the dots of the input signal. For details, see page 50. | according to an input signal           |
|                     | **Shift** Adjusts the position of the picture. H adjusts the horizontal position of the picture. V adjusts the vertical position of the picture. As the setting for H increases, the picture moves to the right, and as the setting decreases, the picture moves to the left. As the setting for V increases, the picture moves up, and as the setting decreases, the picture moves down. Use the ◄ or the ► key to adjust the horizontal position and the ▲ and ▼ key for the vertical position. | according to an input signal           |
| Scan Converter      | Converts the signal to display the picture according to the screen size. When set to “Off,” displays the picture while matching one pixel of input picture element to that of the LCD. The picture will be clear but the picture size will be smaller. | On                                     |
**Notes**

- When SVGA or XGA signal is input, “Scan Converter” will not be displayed.
- Note that if the projector is used for profit or for public viewing, modifying the original picture by switching to the wide mode may constitute an infringement of the rights of authors or producers, which are legally protected.

---

**About the Preset Memory No.**

This projector has 32 types of preset data for input signals (the preset memory). When a preset signal is input, the projector automatically detects the signal type and recalls the data for the signal from the preset memory to adjust it to an optimum picture. The memory number and signal type of that signal are displayed in the INFORMATION menu (See page 38). You can also adjust the preset data through the INPUT SETTING menu.

This projector has 20 types of user memories for INPUT-A into which you can save the setting of the adjusted data for an unpreset input signal.

When an unpreset signal is input for the first time, a memory number is displayed as 0. When you adjust the data of the signal in the INPUT SETTING menu, it will be registered to the projector. If more than 20 user memories are registered, the newest memory always overwrites the oldest one.

*See the chart on page 50 to find if the signal is registered to the preset memory.*

Since the data is recalled from the preset memory about the following signals, you can use these preset data by adjusting “H Size.” Make fine adjustment by adjusting “Shift.”

<table>
<thead>
<tr>

<td>25</td>
<td>1328</td>
</tr>
</tbody>
</table>

**Note**

When the aspect ratio of input signal is other than 4:3, a part of the screen is displayed in black.
The SET SETTING Menu

The SET SETTING menu is used for changing the settings of the projector.

### Setting items | Functions | Initial setting value
---|---|---
Smart APA | The APA (Auto Pixel Alignment) automatically adjusts “Dot Phase,” “H Size” and “Shift” in the INPUT SETTING menu for the input signal from a computer.  
- **On**: When a signal is input from a computer, the APA functions automatically so that the picture can be seen clearly. Once the specified input signal has been adjusted by the “Smart APA,” it will not be readjusted even when the cable is disconnected and connected again or the input channel is changed. You can adjust the picture by pressing APA key on the Remote Commander even if the “Smart APA” set to “On.”  
- **Off**: The APA functions when you press the APA key on the Remote Commander. | On
Auto Input Search | When set to “On,” the projector detects input signals in the following order: Input-A/Component (VPL-ES2 only) /Video/S-Video. It indicates the input channel when the power is turned on or the INPUT key is pressed. | Off
Input-A Signal Sel. | Selects the “Computer,” “Component” or “Video GBR” signal input from the INPUT A connector. | Computer
Color System | Selects the color system of the input signal. If you select “Auto,” the projector detects the color system of the input signal automatically. If the picture is distorted or colorless, select the color system according to the input signal.  
When the color system of the input signal is PAL60, select “PAL.” If “Auto” is selected, the color system cannot be detected. | Auto
Press the APA key when the full image is displayed on the screen. If the projected image includes much black portion around it, the APA function will not work properly and some parts of the image may not be displayed on the screen.

You can cancel the adjustment by pressing the APA key again while “Adjusting” appears on the screen.

The picture may not be adjusted properly depending on the kinds of input signals.

Adjust the items “Dot Phase,” “H Size” and “Shift” in the INPUT SETTING menu when you adjust the picture manually.

Replacing the Lamp

Replace the lamp with a new one in the following case.
- When the lamp has burnt out or dims
- “Please replace the LAMP.” appears on the screen
- The LAMP/COVER indicator lights up

The lamp life varies depending on conditions of use.

Use LMP-E180 (VPL-CS7) / LMP-E150 (VPL-ES2) Projector Lamp as the replacement lamp. Use of any other lamps than the LMP-E180 or the LMP-E150 may cause damage of the projector.

Caution
The lamp becomes a high temperature after turning off the projector with the I / \ key. If you touch the lamp, you may scald your finger. When you replace the lamp, wait for at least an hour for the lamp to cool.

Notes
- If the lamp breaks, consult with customer service center.
- Pull out the lamp by holding the handle. If you touch the lamp, you may be burned or injured.
- When removing the lamp, make sure it remains horizontal, then pull straight up. Do not tilt the lamp. If you pull out the lamp while tilted and if the lamp breaks, the pieces may scatter, causing injury.

1 Turn off the projector, and disconnect the AC power cord from the AC outlet.

Note
When replacing the lamp after using the projector, wait for at least an hour for the lamp to cool.

2 Place a protective sheet (cloth) beneath the projector. Turn the projector over so you can see its underside.

3 Open the lamp cover by loosening a screw with the Phillips screwdriver.

Note
Be sure that the projector is stable after turning it over.

4 Loosen the two screws on the lamp unit with the Phillips screwdriver (1). Fold out the handle (2), pull out the lamp unit by the handle (3).
5 Insert the new lamp all the way in until it is securely in place (1). Tighten the two screws (2). Fold the handle (3).

Be careful not to touch the glass surface of the lamp. The power will not turn on if the lamp is not secured properly.

6 Close the lamp cover and tighten the screws.

7 Turn the projector back over.

8 Connect the power cord. The ON/STANDBY indicator around the I/○ key lights in red.

9 Press the following keys on the remote commander in the following order for less than five seconds each: RESET,◀,▶, ENTER.

Note
Do not put your hands into the lamp replacement spot, or not fall any liquid or object into it to avoid electrical shock or fire.

Disposal of the used lamp
For the customers in the USA
This product contains mercury. Disposal of this product may be regulated if sold in the United States. For disposal or recycling information, please contact your local authorities or Electronics Industries Alliance (http://www.eiae.org).

Notes
- Be careful not to touch the glass surface of the lamp.
- The power will not turn on if the lamp is not secured properly.
Cleaning the Air Filter

The air filter should be cleaned every 500 hours. Remove dust from the outside of the ventilation holes with a vacuum cleaner when the message “Please clean the filter” appears in the display. 500 hours are approximate. This value varies depending on the environment or how the projector is used.

When it becomes difficult to remove the dust from the filter with a vacuum cleaner, remove the air filter and wash it.

1. Turn off the power and unplug the power cord.
2. Place a protective sheet (cloth) beneath the projector and turn the projector over.
3. Remove the air filter cover.
4. Remove the air filter.
5. Wash the air filter with a mild detergent solution and dry it in a shaded place.
6. Attach the air filter and replace the cover.

Notes

- If you neglect to clean the air filter, dust may accumulate, clogging it. As a result, the temperature may rise inside the unit, leading to a possible malfunction or fire.
- If the dust cannot be removed from the air filter, replace the air filter with the supplied new one.
- Be sure to attach the air filter cover firmly. Otherwise, dust may accumulate inside the projector, leading to a possible malfunction.
Troubleshooting

If the projector appears to be operating erratically, try to diagnose and correct the problem using the following instructions. If the problem persists, consult with qualified Sony personnel.

Power

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause and Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The power is not turned on.</td>
<td>• The power has been turned off and on with the I / key at a short interval. &lt;br&gt; → Wait for about 90 seconds before turning on the power (see page 22).&lt;br&gt; • The lamp cover is detached. &lt;br&gt; → Close the lamp cover securely (see page 41).</td>
</tr>
<tr>
<td>Both the LAMP/COVER and TEMP/FAN indicators light up.</td>
<td>• The electrical system breaks down. &lt;br&gt; → Consult with qualified Sony personnel.</td>
</tr>
<tr>
<td>The powered tilt adjuster and the lens protector do not close.</td>
<td>• The AC power cord is unplugged with the power of the projector turned on. &lt;br&gt; → Connect the power cord plug to the AC outlet again, then turn off the power of the projector.</td>
</tr>
<tr>
<td>The powered tilt adjuster and the lens protector do not work at all.</td>
<td>• The electrical system breaks down. &lt;br&gt; → Consult with qualified Sony personnel. If it is necessary to use the projector in case of emergency, use it in the emergency mode (see page 47).</td>
</tr>
</tbody>

| The control panel keys do not function. | • The control panel keys are locked.  
  ➔ Unlock the control panel keys (see page 34). |

### Indicators

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause and Remedy</th>
</tr>
</thead>
</table>
| The LAMP/COVER indicator flashes. | • The lamp cover is detached.  
  ➔ Attach the cover securely (see page 41).  
• The lens protector does not open due to a problem.  
  ➔ Consult with qualified Sony personnel. If it is necessary to use the projector in case of emergency, use it in the emergency mode (see page 47). |
| The LAMP/COVER indicator lights up. | • The lamp has reached the end of its life.  
  ➔ Replace the lamp (see page 40).  
• The lamp becomes a high temperature.  
  ➔ Wait for 90 seconds to cool down the lamp and turn on the power again (see page 21). |
| The TEMP/FAN indicator flashes. | • The fan is broken.  
  ➔ Consult with qualified Sony personnel. |
| The TEMP/FAN indicator lights up. | • The internal temperature is unusually high.  
  ➔ Check to see if anything is blocking the ventilation holes.  
• Check to see whether or not the projector is being used at high altitudes. |
| Both the LAMP/COVER and TEMP/FAN indicators light up. | • The electrical system breaks down.  
  ➔ Consult with qualified Sony personnel. |

</thead>
</table>
| High temp.!                   | • Internal temperature is too high.  
   Probably use in high altitude. Switch to high altitude mode on? Yes † No ‡  
   ➔ When using the projector at an altitude of 1,500 m or higher, set the setting of “High Altitude Mode” in the INSTALL SETTING menu to on. (see page 36)  
   ➔ If this message appears on the screen when using the projector at normal altitudes, check to see if anything is blocking the ventilation holes (exhaust). |
| High temp.! Lamp off in 1 min.| • Internal temperature is too high.  
   ➔ Turn off the power.  
   ➔ Check to see if anything is blocking the ventilation holes.                                                                                                                                             |
| Frequency is out of range!    | • This input signal cannot be projected as the frequency is out of the acceptable range of the projector.  
   ➔ Input a signal that is within the range of the frequency.  
   ➔ The resolution setting of the output signal of a computer is too high.  
   ➔ Set the setting of output to SVGA (see page 17).                                                                                                                                                    |
| Please check Input-A Signal Sel.| • You have input RGB signal from the computer when “Input-A Signal Sel.” in the SET SETTING menu is set to “Component.”  
   ➔ Set “Input-A Signal Sel.” correctly (see page 33).                                                                                                                                                   |
| Please replace the LAMP.      | • It is time to replace the lamp.  
   ➔ Replace the lamp. (see page 40)                                                                                                                                                                          |
| Please clean the filter.      | • It is time to clean the filter.  
   • Clean the filter. (see page 42)                                                                                                                                                                           |

Caution Messages
Use the list below to check the meaning of the messages displayed on the screen.

<table>
<thead>
<tr>
<th>Message</th>

</tr>
</thead>
</table>
| Not applicable!               | • You have pressed the wrong key.  
   ➔ Press the appropriate key.                                                                                                                                                                                     |
| The panel keys are locked !   | • “Panel Key Lock” in the INSTALL SETTING menu is set to “On.”  
   ➔ All the keys on the control panel of the projector are locked.  
   Operate the projector with the keys on the Remote Commander (see page 34).                                                                                                                                   |
On the emergency mode
Before performing the following procedure, try to diagnose the problem using the instructions described in “Troubleshooting” on page 43. If the problem persists, read and following procedure thoroughly and then proceed.

The projector is equipped with the emergency mode for the lens protector and the powered tilt adjuster. If the powered function does not work, you can operate the lens protector and the tilt adjuster (emergency mode) manually.

**Note**
Perform this procedure only in an emergency case. You cannot recover the powered function yourself if you perform this procedure. After you use the projector in the emergency mode, consult with qualified Sony personnel immediately.

**To switch to the emergency mode, follow the steps below.**

1 Place a protective sheet (cloth) beneath the projector. Turn the projector over so you can see its underside.

2 Slide switch [A] in the slit in front of the adjuster in the direction of the arrow with the small minus screwdriver.
The lens protector and the tilt adjuster are switched to the emergency mode.

3 When opening/closing the lens protector, turn the groove of the adjuster with a coin.
When the lens protector is left open, or the tilt adjuster is extended, turn the groove counterclockwise (in direction of the arrow).

**Note**
Turn the projector on when the lens protector on the front of the projector is completely open.
Specifications

Optical characteristics

Projection system
3 LCD panels, 1 lens, projection system

LCD panel
Superhigh-aperture 0.62-inch SVGA panel, 1,440,000 pixels (480,000 pixels × 3)

Lens
1.2 times zoom lens (manual) f 18.0 to 21.6 mm/F 2.2 to 2.4

Lamp
VPL-CS7: 185 W UHP
VPL-ES2: 157 W UHP

Projection picture size
Range: 40 to 300 inches (diagonal measure)

Light output
VPL-CS7: 1800 ANSI1) lm
VPL-ES2: 1500 ANSI1) lm
(When the Lamp Mode is set to “High”)

Throwing distance (When placing on the floor)
When the SVGA signal is input:
40-inch: 1.1 to 1.4 m (3.6 to 4.6 feet)
60-inch: 1.7 to 2.1 m (5.6 to 6.9 feet)
80-inch: 2.3 to 2.8 m (7.5 to 9.2 feet)
100-inch: 2.9 to 3.5 m (9.5 to 11.5 feet)
120-inch: 3.5 to 4.2 m (11.5 to 13.8 feet)
150-inch: 4.4 to 5.3 m (14.4 to 17.4 feet)
200-inch: 5.9 to 7.0 m (19.4 to 28.9 feet)
300-inch: 8.8 to 10.6 m (23 to 34.8 feet)

There may be a slight difference between the actual value and the design value shown above.

Electrical characteristics

Color system
NTSC3.58/PAL/SECAM/
NTSC4.43/PAL-M/PAL-N/
PAL60 system, switched automatically/manually

Resolution
600 horizontal TV lines (Video input)
800 × 600 dots (RGB input)

Acceptable computer signals2)

fH: 19 to 72 kHz
fV: 48 to 92 Hz
(Maximum input signal resolution:
XGA 1024 × 768
fV: 85 Hz)

Applicable video signals
15 kHz RGB/Component 50/60 Hz, Progressive Component 50/60 Hz, DTV (480/60i, 575/50i, 1080/60i, 480/60p, 575/50p, 1080/50i 720/60p, 720/50p, 540/60p), Composite video, Y/C video

Speaker
Monaural speaker system, 40 × 20 mm (1 5/8 × 13/16 inches), max. 1 W

Input/Output

Video input
VIDEO: phono type
Composite video: 1 Vp-p ±2 dB sync negative (75 ohms terminated)
S VIDEO: Y/C mini DIN 4-pin type
Y (luminance): 1 Vp-p ±2 dB sync negative (75 ohms terminated)
C (chrominance): burst 0.286 Vp-p ±2 dB (NTSC)
burst 0.3 Vp-p ±2 dB (PAL)

INPUT A
HD D-sub15-pin (female)
Analog RGB/component:
R/R-Y: 0.7 Vp-p ±2 dB (75 ohms terminated)
G: 0.7 Vp-p ±2 dB (75 ohms terminated)
G with sync/Y: 1 Vp-p ±2 dB sync negative (75 ohms terminated)
B/B-Y: 0.7 Vp-p ±2 dB (75 ohms terminated)
SYNC/HD:
Composite sync input: 1-5 Vp-p high impedance, positive/negative
Horizontal sync input: 1-5 Vp-p high impedance, positive/negative

1) ANSI lumen is a measuring method of American National Standard IT 7.228.
2) Set the resolution and the frequency of the signal of the connected computer within the range of acceptable preset signals of the projector.
Specifications

General

Dimensions 295 × 78 × 238 mm (11 5/8 × 3 1/8 × 9 3/8 inches) (w/h/d) (without the projection parts)
Mass VPL-CS7: Approx. 2.9 kg (6 lb 6 oz)
VPL-ES2: Approx. 2.8 kg (6 lb 3 oz)
Power requirements AC 100 to 240 V, 50/60 Hz
Power consumption VPL-CS7: Max. 250 W
VPL-ES2: Max. 220 W (Standby mode: 4.6 W)
Heat dissipation VPL-CS7: 853.1 BTU
VPL-ES2: 750.7 BTU
Operating temperature 0°C to 35°C (32°F to 95°F)
Operating humidity 35% to 85% (no condensation)
Storage temperature −20°C to +60°C (−4°F to 140°F)
Storage humidity 10% to 90%
Supplied accessories Remote Commander (1)
Lithium battery CR2025 (1)
HD D-sub 15 pin cable (2 m) (1)
(1-791-992-21)
Soft case (1)

Audio
Stereo minijack
500 mVrms, impedance more than 47 kilohms

Output
MONITOR OUT (VPL-CS7 only): HD D-sub 15-pin (female)
R, G, B: Gain Unity: 75 ohms
SYNC/HD, VD: 4 Vp-p (open), 1 Vp-p (75 ohms)
