

Brainhack Warsaw 2026

2026-02-06

From April 17 to 19, 2026, the Faculty of Physics at the University of Warsaw will host the eighth edition of Brainhack Warsaw! This three-day event, combining a hackathon and a mini-conference, is a unique chance to meet inspiring and enthusiastic researchers, build lasting connections within the academic community, exchange ideas, and actively support open science in the true spirit of the Brainhack community.

The project may focus on the analysis of your own data or data obtained from public scientific repositories. At the time of registration, this can be just a preliminary idea and does not have to be related to neuronal data analysis—each year we also host projects focused on psychophysiological data analysis, data mining, and the use of language models. Descriptions of projects from the two most recent editions are available on our website brainhackwarsaw.fuw.edu.pl/

If you would like to submit your project, please complete the registration form by February 13, 2026.
